Access our web site at WWW.Oakmark.COM to obtain a prospectus, an application or periodic reports, or call 1-800-OAKMARK (1-800-625-6275) or (617) 449-6274.

Dear Fellow Shareholders:

After a volatile and emotional 2001, we continue to remain focused on our primary task: generating investment returns that help our shareholders meet their long-term investment goals.

.....

The Global Economy

It appears that a global recovery is developing, and while valuation levels are still high, markets in general are not dramatically overvalued. Unfortunately, a general lack of pricing power and rising cost pressures raise questions about the magnitude of the profit rebound in a recovery. Thus, we expect the rest of 2002 to be a challenging investment environment, but one where we believe the strength of our value philosophy and process can provide satisfactory results.

Realistic Expectations

When assessing how we have done for our investors, we hold ourselves to two standards. First, are we generating positive rates of return? Second, what are our returns versus the benchmarks over time? As you can see from the performance charts in the subsequent pages, we continue to generate positive answers to both questions. We use two standards to help us keep the proper perspective in managing your funds.

We are confident that common stocks over the long term will be excellent vehicles for meeting financial goals. However, the important lesson of the last 2 years is that risk assessment has to be part of the investment process. Because of the very strong market of the 1990's, many investors were mesmerized by the potential for large gains without considering possible risks. They forgot that the only true impediment to long-term wealth accumulation is loss of capital: one or two down years negates the benefits of compounding. Capital preservation is a focus of our philosophy and process and our shareholders have and will benefit from this emphasis.

Avoiding Enrons

The complex situation with Enron raised numerous questions about corporate integrity. We do not believe this event is symptomatic of system-wide problems. It does highlight, among other things, the importance of thorough analysis to investment success. At Oakmark, we have always performed extensive analysis of *all three* financial statements: the balance sheet, the income statement, and the cash flow statement — not simply a cursory look at a summary statistic like earnings-per-share (EPS). Our firm is driven by its analytical strength, and issues relating to accounting and the goals of company management have always been critical to our process.

Morningstar Manager of the Year

In early January, Bill Nygren, portfolio manager of The Oakmark and Oakmark Select Funds, received Morningtar's¹ Domestic-Equity Manager of the Year award. This is a well deserved honor for Bill, and as Bill himself acknowledges, this also reflects on the strength of our analyst team. Our investment analyst group is talented and experienced. We continue to believe our key strength — in addition to a strict adherence to value investing — is the depth and quality of the people in our firm.

Thank you for your continued investment with The Oakmark Family of Funds.

THE OAKMARK AND OAKMARK SELECT FUNDS

At Oakmark, we look for stocks with prices less than 60% of intrinsic value, with intrinsic value that is likely to grow and with management that acts in the interest of outside shareholders. The combination of these factors creates **our biggest competitive advantage—the ability to be more patient than most investors.**

I just returned from a Spring Break vacation with my

children at a resort where the primary means of transportation was by golf cart. For kids who are just a few years away from driving cars, driving golf carts was the coolest part of the vacation! When I first rode in the carts with them, cutting something of a zigzag path down the road, I was reminded of what a problem over-steering is for

inexperienced drivers. When driving too far to the left, the temptation is to make a sharp turn to the right, but then the car ends up too far to the right and again needs correcting. Every drivers education course teaches that the best way to combat oversteering is to move one's field of vision further down the road. Effectively, the further down the road you are watching, the easier it is to drive straight. For experienced drivers, over-steering isn't an issue because it is second-nature to watch a long way down the road.

Even for experienced stock market investors, however, over-steering continues to influence their investment choices. Stock prices react sharply to minor changes in short-term expectations, creating opportunities for investors looking further down the road. As one extends the timeframe, one's focus also changes. In your personal life, if you are thinking about tomorrow, you might be focused on your appointments, the food you will eat, or even what the weather might be. But, if instead you think five years into the future, those issues all become trivial and the focus shifts to more substantial issues like your physical and financial well-being and spending time with the people you care about. The same holds true in the stock market. The investor trying to predict how a stock price will change this week focuses on stock charts that may help assess recent buying and selling interest, the release of economic statistics, or earnings results that are a penny different than expectations. The focus is very much on data that reflect the academic definition of risk stock price volatility. But as Peter Bernstein wrote in

Highlights

- Our investments are based on how a business may change over five years.
- We attempt to take advantage of market overreaction to short-term events.
- Mutual Fund investors could also benefit from using a longer time horizon.

his book, *Against the Gods—The Remarkable Story of Risk*, (yes, vacation reading was this exciting!), "Once we introduce the element of time, the linkage between risk and volatility begins to diminish."

Our greatest competitive advantage at The Oakmark Family of Funds is that we are in a shrinking group of investors who make decisions based on long-term expectations. Our approach has always been to think about how a business might change over the next five years. When one extends the investment timeframe to five years, just as in one's personal life, the key issues become more meaningful. The focus moves from stock market data to an analysis of the business—its competitive position, financial strength, growth prospects, quality of management and so on. Risk shifts from price volatility to the inaccuracy of our long-term business forecasts.

Using one of our holdings, Washington Mutual, as an example, we can see how the analysis changes. Most Wall Street reports advise on a very short time horizon. These reports are now focused on how first quarter earnings will compare to consensus expectations of 97¢, and whether or not the Fed will raise interest rates at their next meeting. Thinking about our five-year horizon, we focus on a company that is likely to be much more valuable because it will gain further competitive advantage from lowering its cost structure, and will grow its earnings and dividends by 60-100% (10-15% annual growth). If we are right, it will also likely benefit from a higher P/E⁴ ratio—its current relative P/E ratio of 30% compared to the S&P 5005 is near historic lows. Over our time horizon, the short-term volatility becomes trivial—a result of minor deviations from

expectations; instead, the accuracy of our long-term forecasts becomes critical.

Peter Bernstein goes on to say that "For true longterm investors, that small group of people like Warren Buffett who can shut their eyes to short-term fluctuations. . . volatility represents opportunity rather than risk." By using a long-term horizon we benefit in several ways. First, our analysis looks at current intrinsic value and the likely changes to future intrinsic value. Second, we believe we are more skilled at analyzing variables that affect intrinsic value than we are at analyzing short-term stock market data. Third, our portfolios enjoy the lower costs that are associated with below-average turnover (and the related tax advantages). Conventional wisdom says long-term investing is a defensive, old-fashioned way to invest. We find, to the contrary, that investing for the long-term is our best offensive weapon—it allows us to take advantage of opportunities created by others who over-steer, or over-react to short-term events.

Mutual fund investors also hurt themselves by "oversteering." Investors obsessively monitor short-term performance and "correct" their portfolios by increasing exposure to what has recently been successful. A study of mutual fund investors, published last quarter by the Dalbar consulting firm, showed that in the last fifteen years mutual fund investors achieved annual returns of nearly ten percentage points less than returns achieved by the S&P 500. The great majority of the shortfall was not caused by underperformance of mutual funds themselves, but rather by the tendency of investors to oversteer. They zig-zagged down the road, investing in funds they wished they had owned only to find those funds no longer produced attractive returns, and then they kept repeating the process.

We have always encouraged our shareholders to take a long-term view and to use our funds as part of a balanced approach to managing their assets. Two years ago, we were strongly suggesting that the high returns in growth funds meant that investors who wanted to stay balanced needed to reduce holdings in growth funds and increase holdings in value funds. Unfortunately, many investors did just the

opposite. Now, following two very good years for value investors (and difficult years for growth) we are often asked if that same advice doesn't suggest that investors should now reduce value holdings. Despite the intuitive appeal of that logic, there are two reasons why we say "no." First, investors have not yet compensated for their "over-steering" in the growth direction. According to figures compiled by Lipper, assets in growth funds still exceed assets in value funds by more than 10%. In general, investors who desire a balance between growth and value still need to steer in the direction of value. Second, the holdings in our portfolios are not static and look quite different than they did two years ago. Since growth stocks have fallen, and have begun to meet our valuation criteria, our portfolios now have heavier weightings in companies that enjoy aboveaverage growth. Because stock prices direct changes in our portfolios, our shareholders need to rebalance less frequently. By taking the long-term view, we hope our shareholders and prospective shareholders stay focused on the importance of our investment approach—our unrelenting focus on business value —rather than merely focusing on our recent results.

We continue to believe the market is allowing us to construct portfolios that have above-average growth prospects at below-average prices. We also continue to believe that technology stocks are generally priced at unattractive values. Last quarter, *Barron's* increased their tech coverage, further anecdotal evidence of too much interest in technology stocks. Maybe when *Barron's* introduces a "Savings & Loan" pullout section, it will be time to sell Washington Mutual, currently the largest holding in both funds!

Report from Bill Nygren and Kevin Grant, Portfolio Managers

.....

THE VALUE OF A \$10,000 INVESTMENT IN THE OAKMARK FUND FROM ITS INCEPTION (8/5/91) TO PRESENT (3/31/02) AS COMPARED TO THE STANDARD & POOR'S 500 INDEX⁵

Average Annual Total Returns²

		(as of 3/31/02)				
	Total Return Last 3 Months*	1-year	5-year	10-year	Since Inception (8/5/91)	
Oakmark Fund	4.17%	14.76%	10.27%	16.76%	19.90%	
S&P 500	0.27%	0.24%	10.17%	13.25%	13.04%	
Dow Jones Average ⁶	4.32%	7.17%	11.44%	14.85%	14.81%	
Lipper Large Cap Value Index ⁷	1.92%	1.02%	9.43%	12.39%	12.46%	

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

The Oakmark Fund increased in value by 4% last quarter, allowing the Fund to achieve a new all-time high price. We are pleased with that performance based on absolute returns, relative to market indices and relative to the other large-cap value funds with which we compete. We added only one new holding last quarter—Schering Plough. It is another in our growing list of large-cap, growth-stock, fallen angels.

Schering Plough (SGP—\$31)

Schering Plough is a worldwide manufacturer of prescription and over-thecounter drugs. In 1999, Schering reached a stock price of \$61 as their earnings hit an all-time high of \$1.42 per share. Despite higher earnings—EPS are estimated to be \$1.75 this year—the analysis of Schering is now focused on the upcoming expiration of some of the U.S. patent protection on their largest selling drug, Claritin. Claritin's U.S. sales account for less than 30% of revenues, and generic competition will certainly reduce Claritin's profitability. However, we believe a 50% reduction in the stock price has more than compensated for this loss. With the stock now selling at about eighteen times next year's estimated earnings, we believe Schering is selling at a large discount to its intrinsic value. Perhaps the market view of Schering will change as attention shifts to next year's expected launch of a new anti-cholesterol compound. If not, we believe Schering could be an attractive acquisition candidate for other large pharmaceutical companies.

Finally, an update on the Fund's tax position. The Oakmark Fund has produced a cumulative return of 38% since the beginning of calendar year 2000. Despite that gain, we have made no taxable capital gain distributions because of the loss-carry forward the Fund enjoys. The Fund continues to have a loss-carry forward of over 75¢ per share, so it is our expectation that there will be no capital gains distribution again this year.

THE VALUE OF A \$10,000 INVESTMENT IN THE OAKMARK SELECT FUND FROM ITS INCEPTION (11/1/96) TO PRESENT (3/31/02) AS COMPARED TO THE STANDARD & POOR'S 500 INDEX⁵

Average Annual Total Returns²

			(as of 3/31/02)	
	Total Return ast 3 Months*	1-year	5-year	Since Inception (11/1/96)
Oakmark Select Fund	2.53%	16.69%	25.82%	28.14%
S&P 500	0.27%	0.24%	10.17%	10.97%
S&P MidCap 400 ⁸	6.72%	18.89%	17.98%	17.38%
Lipper Mid Cap Value Index ⁹	6.23%	17.94%	11.51%	11.38%

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

The Oakmark Select Fund increased in value by 3% for the quarter. That increase put the Fund's NAV10 at another new quarter-end high. Since our goal is to compound wealth at above-average returns over a long time period, it is always rewarding to report that during the quarter we reached new high prices. On a relative basis, the Fund outperformed the S&P 500 but lagged some of our value peers. The main reason for this was the continued strong performance of smaller, more cyclical companies. As you know, The Oakmark Select Fund's portfolio has been shifting away from those names as they have achieved price targets and has been reinvesting in higher quality, larger-cap companies because we believe those stocks have become undervalued.

During the quarter we completed sales of Liz Claiborne, Reynolds & Reynolds, and Ceridian. With those positions eliminated, the Fund is back down to its target of twenty or fewer positions. Your Fund's largest position continues to be Washington Mutual, the largest savings and loan in the country, which is priced at just above eight times estimated earnings. Questions were raised last quarter about the quality of Washington Mutual's earnings, the gains they have taken on financial hedges, and the vulnerability of their earnings to interest rate increases. These are all issues we had considered long before Enron put accounting analysis in the spotlight. We continue to believe that Washington Mutual uses appropriate accounting, and that hedging activity reduces their vulnerability to interest rate changes. It is our largest position because it is the single stock we are most confident is significantly undervalued.

Thank you for your support.

Report from James P. Benson and Clyde S. McGregor, Portfolio Managers

THE VALUE OF A \$10,000 INVESTMENT IN THE OAKMARK SMALL CAP FUND FROM ITS INCEPTION (11/1/95) TO PRESENT (3/31/02) AS COMPARED TO THE RUSSELL 2000 INDEX¹¹

Average Annual Total Returns²

	(as of 3/31/02)				
	Total Return Last 3 Months	,	5-year	Since Inception (11/1/95)	
Oakmark Small Cap Fund	12.26%	34.79%	9.54%	14.62%	
Russell 2000	3.98%	13.98%	9.52%	10.17%	
S&P Small Cap 600 ¹²	6.97%	21.97%	13.44%	13.67%	
Lipper Small Cap Value Index ¹³	7.98%	23.50%	12.49%	13.52%	

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

During the first calendar quarter of 2002, your Fund produced a gain of 12% as small cap stocks continued their above average relative performance. The Russell 2000 Small Cap Index rose 4% for the just ended quarter, thus your Fund outperformed the Russell 2000 by over 8% for the calendar quarter ending March 31, 2002. While the strength in smaller cap stock prices over the past two quarters would indicate that investors have begun to rediscover smaller company stocks, we continue to believe we can find more attractively priced smaller cap stocks vis-àvis larger cap stocks. However, we also believe as investor money gravitates towards small cap stocks it is becoming more difficult to find the wonderful small cap stock bargains we were able to uncover a year or two ago. Looking forward, we believe that when the economy recovers, significant upside still exists for small cap stocks, but we would not expect the quarterly gains to be as strong as we have achieved during the past two quarters.

Finding Value In Today's Stock Market

As our analysts survey the investment landscape to uncover stocks in which your Fund can invest, we are struck by how few traditional manufacturing companies we are excited about owning. Smaller manufacturers have been a sector we have looked to for investments, yet in today's economy we can find only a relative few that we view as good values. Our principal investment thesis is that we want to own good businesses that have an above average probability of growing the value of their business over time and we want to pay a rational price for that business. In recent years we have largely concluded that many small manufacturers face a multitude of hurdles

^{*} Not annualized

that inhibit the growth of their business value over time. These hurdles include severe pricing pressure from their customers (often large assemblers like the auto manufacturers or large retailers such as Wal-Mart or Home Depot), stiff foreign competition from companies in low-wage countries and legacy legal problems like asbestos or other EPA related problems.

Given these issues, we believe it is difficult (but not impossible) for smaller manufacturers to grow their business value over our investment time horizon of three to five years. Therefore, we have been concentrating our investments into businesses that largely do not face the aforementioned problems. In so doing, we have ventured into some industries that are not thought of as traditional for value investors, but we would disagree since we continue to adhere to the principle of trying to buy good businesses at attractive prices.

Recent Portfolio Changes

The Fund's portfolio remained steady at forty-nine stocks over the past quarter as we bought four new companies and sold four of our holdings. We sold American Greetings, Georgia Gulf Corporation and Standard Motor Products after these stocks appreciated to our sell targets while we sold Oratec Interventions after the company agreed to be acquired at a nice premium. We initiated positions in Insituform Technologies, Oakley Inc., Sensient Technologies and Surebeam Corp.

Our new purchases are companies in diverse industries (sewer pipe restorations, sunglasses & sporting apparel, food flavorings & inks and food irradiation processing,

Highlights

- Even with significant strength in small cap stock prices over the past two quarters, we continue to believe we can find attractively priced small caps stocks. We estimate that small caps have further upside potential, but the rate of gain is likely to slow from the recent torrid pace.
- The Fund's portfolio remained steady at 49 stocks over the past quarter, as we bought four new companies and sold four of our holdings.
- New purchases are in diverse industries—sewer pipe restorations, sunglasses & sporting apparel, food flavorings & inks, and food irradiation processing—with well above-average businesses that we believe have bright futures.

respectively) with well above average businesses that we believe have bright futures. Insituform is a firm that has a dominant share of repairing and replacing municipal sewer pipes using a trenchless technique. The trenchless method is less disruptive than the older trench technique and can be less expensive as well. With municipal sewer systems aging and the EPA becoming more active in encouraging cities to fix their leaking sewer systems, we believe demand for Insituform's products and services is likely to experience solid growth over the next five years. This growth profile, combined with a good balance sheet, projected growth in cash flow and a stock trading at an attractive level prompted us to add this company to your Fund.

Disruption Creates Opportunity

Oakley Inc. is a company with a well known brand (especially among younger consumers) whose stock suffered a setback after Sunglass Hut stopped selling Oakley products last year. This created an opportunity for us to buy this stock at what we believe are attractive prices. Simultaneous to our investment, a surge of activity occurred at Oakley where the management team aggressively pursued additional outlets for its products. Given Oakley's brand strength, numerous quality retailers quickly agreed to sell Oakley's products. This created enough pressure on Sunglass Hut to resume selling Oakley products in early 2002.

This impressive display of Oakley's brand strength is buttressed by the innovation and style that Oakley builds into its products. Oakley's innovative products are protected by over 400 patents worldwide, and their engineers and designers have excellent track records producing cutting edge designs. We believe the stocks of most producers of premium consumer goods trade at multiples of earnings and cash flow that fully value the underlying business, however we do not believe that is the case with respect to Oakley.

Our Outlook For Small Caps

After two consecutive quarters of double digit percentage returns we are finding it somewhat more difficult to find stocks we are sufficiently enthused about to buy. Six months ago it was like shooting fish in a barrel, now it is like shooting fish in a lake—you can still be successful, but you have a higher probability of missing. Our analysts, however, are working hard to uncover additional small cap investment opportunities, and given our style of fairly low-turnover portfolios, we do not need a plethora of new ideas, but rather just a few per quarter. Therefore, we continue to believe small caps have further upside potential,

but the rate of gain is likely to slow from the recent torrid pace.

We would like to sincerely thank our long time share-holders for your ongoing interest in and your support of The Oakmark Small Cap Fund. Additionally, we welcome all of our new shareholders and we look forward to communicating with all of you over the next several years.

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

Ouarter Review

After the extreme volatility experienced in the second half of calendar 2001, the March quarter was comparatively calm in the securities markets. This proved to be a favorable environment for The Oakmark Equity and Income Fund. The Fund returned 4% which contrasts with 1% for the Lipper Balanced Fund Index, our primary standard of comparison. The Fund's equities earned virtually all of the return in the quarter as the bond market began to anticipate future tightening actions by the Federal Reserve.

During the quarter we were active, scooping up shares of companies that had lost investor favor for a variety of reasons. Often these issues had been featured in the portfolios of growth-oriented investors. Morningstar, the leading company evaluating mutual funds, observed this development and declared that the fund was now a "blend" fund rather than value. (Blend funds have characteristics of both value and growth.) Some have asked whether this change offends or troubles us. In fact, the whole growth/value dialectic bores us. Famed investor Warren Buffett has commented extensively on this issue, and we agree with him that growth is simply a factor that helps to determine value.

As investors, we look for value wherever we may find it. Two years ago we were primarily able to discover undervalued securities in sectors that had historically been associated with value investors. Today the situation is quite different as we are finding undervalued stocks in many high quality, higher growth businesses. For example, an emerging "theme" in the portfolio is companies from various segments of the health care industry, an industry normally featured in growth funds. Portfolio

^{*} Not annualized

holdings Apogent Technologies, Caremark, Chiron, Edwards Lifesciences, First Health, Guidant, IMS Health, Omnicare, Techne, Watson Pharmaceuticals, and even CVS, the drug store chain, would seem to indicate that we have targeted the health care sector as an attractive investing opportunity. In fact, we have not made this determination at all - the stocks simply declined to levels where we evaluated them to be selling cheaply. In virtually every case the shares met our price criteria after the companies had disappointed investors counting on steady or accelerating growth. We are perfectly happy to recycle "growth" companies that have lost their former cachet.

As we wrote in last quarter's letter, we believe that investor expectations became excessive in the late 1990's because of the unprecedented returns earned then. The March quarter may be representative of the investing environment for the next few years. If so, we believe that our eclectic value philosophy will serve the Fund well.

Avoiding Mistakes

An unfortunate reality of the investment business is that the range of investing possibilities far exceeds the intellectual grasp of any individual or even any institution. Investors react to this complexity by making various simplifying assumptions. For example, many investors choose only to own stocks from the S&P 500 or the Dow Jones Industrials believing that those who construct the indices have already performed a useful filtering function.

In the March quarter the integrity of corporate accounting became the issue on the front of investors' minds, an outcome of the Enron experience. Shareholders complimented our firm for avoiding Enron while the media repeatedly asked how we knew it would go down. The answer, of course, is that we did not foresee the collapse in Enron's share price. We simply did not have an opinion one way or the other. The simplifying assumption that guided us is this: if we do not understand it, we move on. At any moment in time the market contains thousands of issues that we believe to be overvalued and probably just as many that we do not understand how to value. In the case of Enron, we looked at the stock fairly early in its ascent and could neither understand the nature of the revolution Enron was allegedly initiating nor justify the price investors were paying for the company's activities.

Highlights

- During the quarter we were active, scooping up shares of companies that had lost investor favor for a variety of reasons. Often these issues had been featured in the portfolios of growthoriented investors.
- We are keeping the overall maturity of the fixed-income portion fairly short, and continue to emphasize Treasury inflation-indexed securities (TIPS)—instruments we believe offer the best income-generating potential without risking excessive capital loss.
- An emerging portfolio theme is companies from various segments of the health care industry, an industry normally featured in "growth" funds. However, our approach was not in targeting the sector overall, rather, the stocks simply declined to levels where we evaluated them to be selling cheaply.

Our best advice will always be to "do what you understand." This pertains to individual securities and to mutual funds. If our style of value investing makes sense to you, you will probably make sensible decisions about your investment in our funds. If, rather, you have invested in our funds because of recent results or the managers' pictures, you will be less likely to be satisfied with your experience.

Is the Fed Done Reducing Interest Rates?

Actually, the title to this section is merely a hook, as we do not have an investment opinion on the question of what the Fed will do. Investors in the Fund, however, are questioning us regularly about our fixed income holdings in view of the barrage of articles suggesting that interest rate increases are inevitable. Some of the questions appear to reflect some uncertainty as to our Fund's charter and purpose, so some review is first in order.

The Oakmark Equity and Income Fund is a balanced fund and is to be the least volatile fund in The Oakmark Funds group. Oakmark E&I will always have at least 25% of its

assets invested in US Treasury securities. The Treasurys buffer the volatility of return while enhancing income generation. We choose to take our risks in the equity portion of the portfolio, which is not to exceed 65% of total fund assets. If equities are at 65%, the remaining 35% of the portfolio will be composed of Treasurys, debt of the various government agencies, corporate bonds, preferred stocks, and short term investments. If conditions warrant, the commitment to Treasury securities could far exceed 25%, but we will not fall below that level for any meaningful time period.

With that background, how do we invest the fixed income assets in the Fund as we face the likelihood that the previous cycle of Federal Reserve easing has ended? We first inventory the current conditions. While rates increased modestly in the March quarter, they are still historically low. According to government statistics, inflation is minimal and the economy still has meaningful slack. The futures markets for bonds, however, forecast significant future interest rate increases. Our tactical response has been to keep our overall maturity structure fairly short and to emphasize the Treasury inflation-indexed securities (TIPS). We have written extensively on TIPS in previous shareholder letters, so we will only reiterate that these instruments offer what we believe is the best compromise between our desire to earn income for our shareholders without risking excessive capital loss.

As always, we thank you for your interest in our Fund and welcome your comments and questions.

THE OAKMARK GLOBAL FUND

Report from Gregory L. Jackson and Michael J. Welsh, Portfolio Managers

THE VALUE OF A \$10,000 INVESTMENT IN THE OAKMARK GLOBAL FUND FROM ITS INCEPTION (8/4/99) TO PRESENT (3/31/02) AS COMPARED TO THE MSCI WORLD INDEX¹⁶

Average Annual Total Returns²

(as of 3/31/02)

	Total Return Last 3 Month	•	Since Inception (8/4/99)
Oakmark Global Fund	10.86%	34.04%	17.53% ³
MSCI World	0.34%	-4.24%	-6.48%
Lipper Global Fund Index ¹⁷	0.96%	-2.98%	-1.93%

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

Fellow Shareholders.

The Oakmark Global Fund continued its strong performance this quarter, gaining 11% for the three-month period ending March 31, 2002. The Fund's performance compares favorably with that of the MSCI World and the Lipper Global Fund indices, which were up 0.3% and 1%, respectively.

Over the past twelve months ending March 31, 2002, The Oakmark Global Fund returned a positive 34% compared to declines of 4% and 3%, respectively, for the MSCI World Index and the Lipper Global Fund Index. We believe this significant out-performance of your Fund amidst turbulent global markets is a reflection of our focus on downside protection in the portfolio as well as capital appreciation.

We are also pleased to report that as of quarter-end, your Fund was ranked the #1 global fund in the Lipper¹⁸ Universe (219 Funds) since our inception in August, 1999.

Investment Environment

As we write this letter we are in the midst of a global bear market, a notion that would have been considered quaint when this Fund was launched at the height of the internet bubble in August, 1999. As long-term investors however, we are not overly concerned about the market's decline to date. On the contrary, we consider much of what has happened and what is currently happening in the markets as rational behavior. It is a natural and healthy process when speculation and excesses are wrung out of the market.

Last year we wrote about the bursting of the global bubble in technology, media and telecom companies. While the bubble continues to burst, the market has also found new issues

^{*} Not annualized

to obsess over. For example, share prices of companies using aggressive accounting are falling. In addition, the credit markets refuse to lend to companies with excessive debt or to companies that fail to generate free cash flow. Further, outside of bankruptcy proceedings, capital intensive telecommunications businesses with commodity—like products are having difficulty attracting capital. One should not be surprised at the market's reaction. It is rational to apply a risk premium where risk exists. As value investors, we have of course always critically assessed each business we invest in, attempting to avoid exactly these issues. Those employing momentum strategies and investors unwilling to take the time to read through boring annual reports, regulatory filings and industry analysis are caught holding the bag.

There is no doubt however, that in addition to continued problems in those industries, the current market is reflecting a decline in corporate profitability. On a macro level, the U.S. and European economies have slowed to a growth rate of just above 1% in 2001. The world's second largest economy, Japan, fell into recession. The impact on profits, especially in the U.S., has been dramatic. Profits have also declined in Europe but at a much lower rate. Based on our micro view, part of the decline in profits is permanent, as excess or even artificial levels of demand for certain products and services will likely not be seen again. Another part of the decline has to do with snap reactions such as inventory and personnel reductions in expectation of lower demand. We would expect the latter part of the reduction to accrue back to corporate income statements. Either way, return on equity for the markets as a whole have declined and the market has reacted by selling.

That said, a snapshot of the U.S. economy—if you can remove yourself from the psychology of the last two years—looks relatively healthy. The unemployment rate at 5.6% is what just a few years ago would have been considered to be the long-term frictional rate. Consumer spending continues to grow evidenced by strong retail sales and housing figures. Further, business inventories and payrolls are lean while the banking system is showing close to record levels of common equity to loans outstanding. Considering the terrorist attacks and the war in Afghanistan, the economy to date has held up remarkably well.

Highlights

- We have made significant changes in the Fund's holdings over the past six months as the overall market decline has allowed for what we believe is a considerable upgrade in the quality of the companies held in the portfolio.
- Flexibility is our mandate, as we can pick from our entire investment team's best ideas—small, medium, large caps, foreign or domestic. As short-term market volatility provides new longterm opportunities, we won't hesitate to switch out of companies that are at higher valuations or lower quality, and into new alternatives.
- The Fund celebrates its three-year anniversary this August, and we're pleased that for the period ending March 31, 2002, it ranked the #1 global fund in the Lipper universe (219 funds) since inception in August, 1999.

Portfolio Update

The Oakmark Global Fund is managed using a value philosophy. We search for companies that are priced at a substantial discount to their true business value and are run by managers who think and act as owners. We base our investment decisions on our own intensive, fundamental research. The portfolio is focused, and is constructed and monitored with strict buy and sell disciplines. Investments are made with a long-term horizon. This approach has successfully preserved capital, and should generate superior investment returns over the market cycle.

We have made significant changes in the Fund's holdings over the past six months. Although significant changes in portfolio composition over a short period is not what we would expect in a normal environment, the overall decline in the markets has allowed a significant upgrade in the quality of the companies held in the portfolio.

Over the past two quarters we have added some terrific new situations to the Fund's holdings. In the U.S., for example, we have added First Health and IMS Health in the health-care industry, as well as blue-chips Waste Management, Kroger, and Gap. Overseas we have added three very high quality European blue-chips: Wolters Kluwer (Netherlands), Henkel (Germany), and LM Ericsson (Sweden).

31

Our value strategy dictates two main reasons for selling a stock. First, when a stock hits its target price, our sell discipline requires that it be sold. Over the last few quarters, especially within the U.S., market volatility pushed up the price of several holdings which were subsequently disposed (e.g. NOVA Corporation). Second, when there are substantially more attractive alternatives than the current holdings we take the opportunity to sell an existing position and purchase the shares of the more attractive company.

We feel very fortunate to have the flexibility to be able to pick from the best ideas throughout Harris Associates, be they small, medium, or large caps, or foreign or domestic. When we see short-term market volatility provide new long-term opportunities we won't hesitate to switch out of companies that are either at higher valuations or lower quality than new alternatives.

Looking Forward

We will continue to manage the portfolio using the same value discipline described above. Although we would not expect to achieve the same exceptional level of relative out-performance, we remain excited about the values in the portfolio and expect that over the long-term we could provide superior investment returns. We thank you for your continued support.

THE OAKMARK INTERNATIONAL AND OAKMARK INTERNATIONAL SMALL CAP FUNDS

Fellow Shareholders.

We are happy to report that both of your Funds, Oakmark International and Oakmark International Small Cap, had outstanding quarters. The Oakmark International Fund returned 11% over the last three months, comparing favorably to the 1% and 2% returns posted by the MSCI World ex-U.S. 19 and the Lipper International Fund 20 indices, respectively. Meanwhile, International Small Cap climbed 10% over the last quarter, as compared to a 6% increase for the MSCI Small Cap World ex-U.S. index 21 and a 5% return for the Lipper International Small Cap Average. 22

Based on the attractive valuations of the businesses we own in the portfolios we continue to remain excited about future prospects. Stocks around the world are attractively priced, economic growth is accelerating, and in general, corporate governance continues to strengthen.

What is Enron-itis?

The world has been a buzz about the scandal at Enron for some time now. Sadly, in our opinion, the Enron mess is nothing new. We view the events as "more of the same", but on a grander scale. What is "more of the same?" People investing in companies solely because they see share prices going up. The Enron fiasco was another spectacular instance of speculation, not investing. Despite our industry being littered with MBAs, CFAs, CPAs and even PhDs, greed almost always seems to get in the way of a little common sense.

The financial community knew Enron's financial statements were "opaque"—a polite euphemism for intentionally complicated and incomplete. Any investment professional that took the time to analyze Enron's statements could figure out the company generated poor returns and no free cash flow. Industry competitors called Enron "the crooked E." And yet Enron's share price continued climbing, seemingly immune to economic reality. The price, which traded around \$20 in mid-1998, soared to over \$80 in mid-2000. A share will now cost you a few pennies.

We are sometimes asked whether it is difficult to deal with foreign accounting standards and statements. Often the question is posed in a condescending way, the clear implication being that standards for foreign companies are lax relative to their US peers. One lesson we have learned over the past 16 years is that the integrity of any accounting statement, especially the income statement, is a reflection of the

Highlights

- Both Funds had outstanding performance in a troublesome quarter, which we believe is a reflection of our strict adherence to value. We believe the discount to intrinsic value we require before investing gives us a margin of safety, cushioning the blow of down markets.
- Two significant geographical shifts took place in Oakmark International over the past year—a lower weighting in Latin America and a higher weighting in Japan. Latin America declined to 7.5% of the portfolio from 14% at the end of 2000; our weighting in Japan increased to nearly 9%, from less than 2% at year-end 2000.
- The biggest weighting increase in Oakmark Int'l. Small Cap was Switzerland, which jumped to 12% from 7% in December 2001. We have steadily accumulated shares of all our Swiss companies, and added a new name during the quarter, Schindler Holding.

company's management. Companies run by prudent and honest management teams usually have clear and often "understated" financial statements; those run by aggressive, self-promotional managers tend to have very opaque or incomplete accounting statements that sometimes don't quite add up.

To us, we have always viewed the analysis of a company's management team as a major part of our job. It is critical to understand their motivations, incentives, and, to the extent possible, integrity.

And the key in understanding and hopefully avoiding faulty accounting? As we have said from the beginning, watch the CASH.

European Restructuring

A new company in The International Small Cap Fund is Schindler Holding. The Schindler story is in microcosm the story of what has occurred in Europe over the past ten years. This is a company that for most of the 90's was very uncommunicative (and, on occasion, hostile) to outside investors and their questions. We still remember one meeting in particular in 1994, one that took weeks of pleading and negotiating to arrange. Many questions were met with answers dripping with arrogant evasion or outright refusal. They viewed our questions about the controlling family and their indifferent treatment of minority shareholders with unabashed hostility. This line of questioning provoked a classic old-school European response: "Look, the Family has much more at risk than you do! They can't just go out and sell their shares the next day like you can!" They already did sell shares, we replied, and now they have an obligation of fair treatment to those outside investors. End of meeting.

This mentality has changed dramatically. Senior management has been replaced; both the CEO and CFO are Americans. They have repurchased a significant number of shares and just recently announced an authorization to repurchase an additional 10% of the shares outstanding, as well as make a tax-free capital repayment to shareholders. Along with restructuring the balance sheet, they are also focusing on revamping operations. The restructuring plans they have announced include measures to increase the operational competitiveness of the company, with the goal of reducing complexity and costs.

The Oakmark Way

Everyone makes mistakes. But, our mistakes tend to be caused by misjudging the ability of a company's management to allocate capital or not properly weighting a factor that ends up being more important to a company's success. Even though we are not perfect, our mistakes are our own: we rely on our own, independent thorough research. We start with the premise that a company's value is determined by its ability to generate free cash flow and end with an assessment of a management team's ability to drive its assets for profit and invest capital wisely. This forms the basis for an investment decision. Note the difference: price movements drive a speculator's actions; our actions are determined by value assessment. Adherence to this discipline is what has led to our strong perform-

ance since inception, and why we think our process will continue to lead to good results.

Thank you for your continued confidence and support.

April 4, 2002

Report from David G. Herro and Michael J. Welsh, Portfolio Managers

THE VALUE OF A \$10,000 INVESTMENT IN THE OAKMARK INTERNATIONAL FUND FROM ITS INCEPTION (9/30/92) TO PRESENT (3/31/02) COMPARED TO THE MSCI WORLD EX U.S. INDEX 19

Average Annual Total Returns²

	(as of 3/31/02)			
	Total Return Last 3 Months	,	5-year	Since Inception (9/30/92)
Oakmark International Fund	11.46%	15.85%	8.14%	12.64%
MSCI World ex. U.S.	0.57%	-8.08%	1.57%	5.94%
MSCI EAFE ²³	0.51%	-8.50%	1.32%	5.76%
Lipper International Fund Index ²⁰	2.46%	-4.95%	2.75%	7.66%

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

The long-term performance of your Fund has been strong, and we are particularly pleased with the resiliency the Fund has shown in down markets. Over the past three years your Fund has returned 13% on an annualized basis, while all of the major international indices are negative. The discount to intrinsic value that we require before investing in a company gives us a margin of safety we believe helps to cushion the blow of down markets.

Portfolio Update

The two most significant geographical shifts in The Oakmark International Fund since the end of 2000 have been a lower weighting in Latin America (declining to 7.5% from 14%) and a higher weighting in Japan (increased to 9% from 2%). We have added a number of high-quality Japanese businesses to the portfolio in the past year including Meitec, Tokyo Broadcasting and, last quarter, Takeda Pharmaceutical. All three of these businesses generate good economic returns, are run by shareholder-oriented management, and trade at significant discounts to our estimate of intrinsic value.

Even with these additions to the Fund, Japan still remains significantly underrepresented in your Fund relative to the indices; it still comprises roughly 20% of the EAFE and World ex-U.S. indices. We will continue, as we have over the past ten years, to search for quality companies trading at prices that provide real opportunity.

- (d) See footnote number five in the Notes to Financial Statements regarding transactions in affiliated issuers.
- (e) At March 31, 2002, net unrealized appreciation of \$85,953,929, for federal income tax purposes, consisted of gross unrealized appreciation of \$212,763,850 and gross unrealized depreciation of \$126,809,921.
- (f) Includes transaction hedges.

Report from David G. Herro and Michael J. Welsh, Portfolio Managers

THE VALUE OF A \$10,000 INVESTMENT IN THE OAKMARK INTERNATIONAL SMALL CAP FUND FROM ITS INCEPTION (11/1/95) TO PRESENT (3/31/02) AS COMPARED TO THE MSCI WORLD EX U.S. INDEX¹⁹

Average Annual Total Returns²

	(as of 3/31/02)				
	Total Return Last 3 Months	,	5-year	Since Inception (11/1/95)	
Oakmark International Small Cap Fund	10.19%	20.60%	8.74%	9.94%	
MSCI World ex. U.S.	0.57%	-8.08%	1.57%	3.08%	
Lipper International Small Cap Average ²²	4.55%	-4.98%	5.76%	9.72%	

Past performance is no guarantee of future results. Investment return and principal value vary, and you may have a gain or loss when you sell shares. Average annual total return measures annualized change, while total return measures aggregate change.

Portfolio Update

The biggest country weighting increase from last quarter was in Switzerland, which jumped to 12% of the Fund from a little over 7% at the end of December. The share prices of Swiss small caps were hit in the aftermath of September 11th, and many failed to participate in the subsequent Continental European market rallies. This has led to a good buying opportunity.

We have been steadily accumulating shares of all our Swiss companies and added a new name during the quarter, Schindler Holding. Schindler is the world's second largest elevator company, just ahead of Kone (a long-time Oakmark International Fund holding). The share price has stagnated due primarily to lagging technology, slowdowns in their Brazilian and Chinese operations, and the legacy of an insular family-company culture.

Despite the strong performance of your Fund over the past few years, we still believe there are significant opportunities in the market, and that the portfolio remains undervalued. We want to thank you for your continued confidence.

Notes to Financial Statements

1. SIGNIFICANT ACCOUNTING POLICIES

The following are the significant accounting policies of The Oakmark Fund ("Oakmark"), The Oakmark Select Fund ("Select"), The Oakmark Small Cap Fund ("Small Cap"), The Oakmark Equity and Income Fund ("Equity and Income"), The Oakmark Global Fund ("Global"), The Oakmark International Fund ("International"), and The Oakmark International Small Cap Fund ("Int'l Small Cap") collectively referred to as "the Funds", each a series of the Harris Associates Investment Trust (a Massachusetts business trust). These policies are in conformity with accounting principles generally accepted in the United States ("GAAP"). The presentation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates and assumptions.

Class Disclosure —

Each Fund offers two classes of shares: Class I Shares and Class II Shares. Class I Shares are offered to the general public. Class II Shares are offered to certain retirement plans such as 401(k) and profit sharing plans. Class II Shares pay a service fee at the annual rate of .25% of average net assets of Class II Shares of the Fund. This service fee is paid to an administrator for performing the services associated with the administration of such retirement plans.

Expenses of the Funds that are not directly attributable to a specific class of shares are prorated among the classes based on the relative net assets of each class. Expenses directly attributable to a class of shares are recorded to the specific class. At this time, expenses directly attributable to each class are transfer agent fees, service fees and other shareholder servicing fees.

Security valuation —

Investments are stated at market value. Securities traded on securities exchanges, securities traded on the NASDAQ National Market, and Over-the-counter securities are valued at the last sales price on the day of valuation, or if lacking any reported sales that day, at the most recent bid quotation. Debt obligations and money market instruments maturing in more than 60 days from the date of purchase shall be valued at the latest bid quotation. Debt obligations and money market instruments maturing in less than 61 days from the date of purchase are valued on an amortized cost basis which approximates market value. Options are valued at the last reported sale price on the day of valuation, or if lacking any reported sales that day, at the mean of the most recent bid and ask quotations. Securities for which quotations are not readily available are valued at a fair value as determined by the Pricing Committee appointed by the Board of Trustees.

Foreign currency translations—

Values of investments and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars using the mean of the bid and offer prices of such currencies at the time of valuation. Purchases and sales of investments and dividend and interest income are converted at the prevailing rate of exchange on the respective dates of such transactions.

The Funds do not isolate that portion of the results of operations resulting from changes in foreign exchange rates on investments from the fluctuations arising from changes in market prices of securities held. Such fluctuations are included with the net realized gain or loss from investments.

Net realized gains on foreign currency transactions arise from sales of foreign currencies, currency gains or losses realized between the trade and settlement dates on securities transactions, the difference between the amounts of dividends, interest, and foreign withholding taxes recorded on the Funds' books, and the U.S. dollar equivalent of the amounts actually received or paid, and the realized gains or losses resulting from the portfolio and transaction hedges.

At March 31, 2002, only the Global, International and Int'l Small Cap Funds had foreign currency transactions. Net unrealized appreciation (depreciation)-other includes the following components:

	(Global	International	Int'l Small Cap
Unrealized appreciation (depreciation) on dividends and dividend reclaims receivable	\$	652	\$ (6,971)	\$ 1,298
Unrealized appreciation (depreciation) on open securities purchases and sales		58	9,549	21,058
Unrealized appreciation (depreciation) on transaction hedge purchases and sales	(1	,075)	(13,554)	(23,609)
Unrealized appreciation (depreciation) on tax expense payable		(20)	535	(337)
Net Unrealized Appreciation (Depreciation) - Other	\$	<u>(385</u>)	<u>\$(10,441)</u>	<u>\$(1,590</u>)

Notes to Financial Statements (cont.)

Security transactions and investment income —

Security transactions are accounted for on the trade date (date the order to buy or sell is executed) and dividend income is recorded on the ex-dividend date. Interest income and expenses are recorded on the accrual basis.

Fund shares are sold and redeemed on a continuing basis at net asset value. Net asset value per share is determined daily as of the close of regular trading on the New York Stock Exchange on each day the Exchange is open for trading by dividing the total value of the Fund's investments and other assets, less liabilities, by the number of Fund shares outstanding.

Forward foreign currency contracts—

At March 31, 2002, Global, International and Int'l Small Cap had entered into forward foreign currency contracts under which they are obligated to exchange currencies at specified future dates. The Funds' currency transactions are limited to transaction hedging and portfolio hedging involving either specific transactions or portfolio positions.

The contractual amounts of forward foreign exchange contracts do not necessarily represent the amounts potentially subject to risk. The measurement of the risks associated with these instruments is meaningful only when all related and offsetting transactions are considered. Risks arise from the possible inability of counter parties to meet the terms of their contracts and from movements in currency values.

Unrealized

The Global Fund had the following outstanding contracts at March 31, 2002:

Transaction Hedges: Foreign Currency Purchases—

US Dollars Sold	Foreign Curr	ency Purchased	Settlement Date	Unrealized Appreciation (Depreciation) at March 31, 2002
\$ 57,202	65,195	Euro Currency	April 2002	\$ (368)

			<u>\$123</u>

At March 31, 2002, Global, International and Int'l Small Cap Funds each had sufficient cash and/or securities to cover any commitments under these contracts.

Notes to Financial Statements (cont.)

Federal income taxes, dividends and distributions to shareholders —

No provision is made for Federal income taxes. The Funds elect to be taxed as "regulated investment companies" and make such distributions to their shareholders as to be relieved of all Federal income taxes under provisions of current Federal tax law.

Income dividends and capital gains distributions are determined in accordance with federal income tax regulations, which may differ from GAAP. To the extent these tax and book differences are permanent in nature, such amounts are reclassified among paid in capital, undistributed net investment income and undistributed net realized gain (loss) on investments. These differences are primarily related to foreign currency transactions, deferral of losses on wash sales, and character of capital loss carryforwards. The Funds also utilize earnings and profits distributed to shareholders on redemption of shares as a part of the dividends paid deduction for income tax purposes.

Bank Loans —

The Funds have an unsecured line of credit with Investors Bank & Trust. It is a committed line of \$250 million. Borrowings under this arrangement bear interest at .45% above the Federal Funds Effective Rate. As of March 31, 2002, there were no outstanding borrowings.

Accounting for Options -

When the Fund writes an option, the premium received by the Fund is recorded as a liability and is subsequently adjusted to the current market value of the option written. Premiums received from writing options, which expire unexercised, are recorded by the Fund on the expiration date as realized gains from option transactions. The difference between the premium and the amount paid on effecting a closing purchase transaction including brokerage commissions, is also treated as a realized gain, or if the premium is less than the amount paid for the closing purchase transaction, as a realized loss. If a call option is exercised, the premium is added to the proceeds from the sale of the underlying security or currency in determining whether the Fund has realized a gain or a loss. If a put option is exercised, the premium reduces the cost basis of the security or currency purchased by the Fund. In writing an option, the Fund bears the market risk of an unfavorable change in the price of the security or currency underlying the written option. Exercise of an option written by the Fund could result in the Fund selling or buying a security or currency at a price different from the current market value.

During the six months ended March 31, 2002, Oakmark, Select, Small Cap, Equity & Income, and Global wrote option contracts. At March 31, 2002, Small Cap, Equity & Income, and Global had outstanding option contracts. Portfolio securities valued at \$3,517,000, \$12,032,280, and \$11,610,710 were being held in escrow by the custodian as cover for call options and put options written by Small Cap, Equity & Income, and Global.

2. TRANSACTIONS WITH AFFILIATES

Each fund has an investment advisory agreement with Harris Associates L.P. (Adviser). For management services and facilities furnished, the Funds pay the Adviser monthly fees at annual rates as follows. Oakmark pays 1% on the first \$2 billion of net assets, .90% on the next \$1 billion of net assets, .80% on the next \$2 billion of net assets, and .75% on the excess of \$5 billion of net assets. Select pays 1% on the first \$1 billion of net assets, .95% on the next \$500 million of net assets, .90% on the next \$500 million of net assets, .85% on the next \$500 million of net assets, .80% on the next \$2.5 billion of net assets. and .75% on the excess of \$5 billion of net assets. Small Cap pays 1.00% of net assets. Equity and Income pays .75% of net assets. Global pays 1.00% of net assets. International pays 1% on the first \$2 billion of net assets, .95% on the next \$1 billion of net assets, and .85% on the excess of \$3 billion of net assets. Int'l Small Cap pays 1.25% on the first \$500 million and 1.10% on the excess of \$500 million of net assets. Each fee is calculated on the total net assets as determined at the end of each preceding calendar month. The Adviser has voluntarily agreed to reimburse the Funds to the extent that annual expenses, excluding certain expenses, for Class I shares, exceed 1.5% for domestic funds, 2.0% for international funds, 1.75% for the Global Fund and 1.0% for the Equity and Income Fund; or for Class II shares. exceed 1.75% for domestic funds, 2.25% for international funds, 2% for the Global Fund and 1.25% for the Equity and Income Fund.

During the six months ended March 31, 2002, the Funds incurred brokerage commissions of \$3,582,251, \$3,596,465, \$209,756, \$1,741,694, \$227,420, \$1,429,127, and \$588,314 of which \$988,741, \$570,563, \$39,811, \$405,399, \$52,225, \$0, and \$0 were paid by Oakmark, Select, Small Cap, Equity and Income, Global, International and Int'l Small Cap, respectively, to an affiliate of the Adviser.

The Funds' Trustees may participate in a Deferred Compensation Plan which may be terminated at any time. The obligations of the Plan are paid solely out of the assets of the Funds.

^{*} Data has been annualized.

This material must be preceded or accompanied by a prospectus. To order a prospectus, which explains management fees and expenses and the special risks of investing in the funds, visit www.oakmark.com or call 1-800-OAKMARK. Please read the prospectus carefully before investing.

The discussion of investments and investment strategy of the funds represents the investments of the funds and the views of fund managers and Harris Associates L.P., the funds' investment adviser, at the time of this article, and are subject to change without notice.

Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than original cost.

Investing in value stocks presents the risk that value stocks may fall out of favor with investors and underperform growth stocks during given periods.

Because the Oakmark Select Fund is non-diversified, the performance of each holding will have a greater impact on the Fund's total return, and may make the Fund's return more volatile than a more diversified fund.

Investing in foreign securities represents risks which in some way may be greater than in U.S. investments. Those risks include: currency fluctuation; different regulation, accounting standards, trading practices and levels of available information; generally higher transaction costs; and political risks.

The stocks of smaller companies often involve more risk than the stocks of larger companies. Stocks of small companies tend to be more volatile and have a smaller public market than stocks of larger companies. Small companies may have a shorter history of operations than larger companies, may not have as great an ability to raise additional capital and may have a less diversified product line, making them more susceptible to market pressure.

The Oakmark Equity and Income Fund invests in medium and lower-quality debt securities which have higher yield potential but present greater investment and credit risk than higher-quality securities.

- 1. According to Morningstar, the Morningstar Manager of the Year award is presented to portfolio managers based on the managers' (i) "ability to generate exceptional returns;" (ii) "willingness to align their interests with shareholders;" and (iii) "courage to stay with their strategies in order to produce superior risk-adjusted returns in the end.
- 2. Total return includes change in share prices and in each case includes reinvestment of any dividends and capital gain distributions.
 - The performance information for The Oakmark Select Fund, The Oakmark Small Cap Fund, The Oakmark Global Fund, The Oakmark International Fund and The Oakmark International Small Cap Fund does not reflect the imposition of a 2% redemption fee on shares held by an investor less than 90 days. The purpose of this redemption fee is to deter market timers.
- 3. Portfolio holdings are subject to change without notice and are not intended as recommendations of individual stocks.
- 4. The Price-Earnings Ratio ("P/E") is the most common measure of how expensive a stock is.
- 5. The S&P 500 Index is a broad market-weighted average of U.S. blue-chip companies.
- 6. The Dow Jones Industrial Average is an unmanaged index that includes only 30 big companies.
- 7. The Lipper Large Cap Value Fund Index measures the performance of the thirty largest U.S. large-cap value funds tracked by Lipper.
- 8. The S&P MidCap 400 is an unmanaged broad market-weighted index of 400 stocks that are in the next tier down from the S&P 500 and that are chosen for market size, liquidity, and industry group representation.
- 9. The Lipper Mid Cap Value Fund Index measures the performance of the thirty largest U.S. mid-cap value funds tracked by Lipper.

- 10. NAV stands for Net Asset Value. NAV is the dollar value of a single mutual fund share, based on the value of the underlying assets of the fund minus its liabilities divided by the number of outstanding shares.
- 11. The Russell 2000 Index is an unmanaged, market-weighted index, with dividends reinvested, of 2,000 small companies, formed by taking the largest 3,000 small companies and eliminating the largest 1,000 of those companies.
- 12. The S&P Small Cap 600 Index measures the performance of selected U.S. stocks with small market capitalizations.
- 13. The Lipper Small Cap Value Fund Index measures the performance of the thirty largest U.S. small-cap value funds tracked by Lipper.
- 14. The Lipper Balanced Fund Index measures the performance of the thirty largest U.S. balanced funds tracked by Lipper.
- 15. The Lehman Govt./Corp. Bond Index is an unmanaged index that includes the Lehman Government and Lehman Corporate indices.
- 16. The MSCI World Index is made up of 20 country sub-indexes, including the stock exchanges of the U.S., Europe, Canada, Australia and New Zealand and the Far East. This index is unmanaged and investors cannot actually make investments in this index.
- 17. The Lipper Global Fund Index is an unmanaged index that includes 30 mutual funds that invest in securities throughout the world.
- 18. Lipper, Inc. is an independent monitor of mutual fund performance. For the period ended 12/31/01, Global ranked #1 of 290 funds for the 1-year period, #1 of 231 for the 2-year period, and #1 of 222 since inception (8/4/99).
- 19. The MSCI World Ex U.S. Index is an unmanaged index made up of 19 country sub-indexes, excluding the U.S.
- 20. The Lipper International Fund Index is an unmanaged index that includes 30 mutual funds that invest in securities whose primary markets are outside the U.S.
- 21. The Morgan Stanley Small Cap World Ex US Index includes stocks having market capitalizations between \$200-\$800 million across 23 developed markets. This index is unmanaged and investors cannot actually make an investment in this index.
- 22. The Lipper International Small Cap Average includes 76 mutual funds that invest in securities whose primary markets are outside the U.S.
- 23. The MSCI EAFE Index is the Morgan Stanley Europe, Australia, and Far East Index, which is an unmanaged, market-value weighted index designed to measure the overall condition of overseas markets.

Investment Philosophy

All Oakmark managers follow a consistent investment philosophy—to invest in companies they believe are trading at a substantial discount to underlying business value. Critical to this philosophy is to invest with management teams who are committed to maximizing the company's business value.

Three key tenets of our investment philosophy:

- Buy businesses trading at a significant discount to our estimate of true business value.
- 2 Invest in companies expected to grow shareholder value over time.
- Invest with management teams who think and act as owners.

Investment Process

We seek to identify undervalued companies through an intensive, in-house research process. This process is not based on macro-economic factors, such as the performance of the economy or the direction of interest rates. Nor is it based on technical factors, such as the performance of the stock market itself. And, while some value managers might use only one summary statistic—such as price-earnings ratio—our investment professionals take a more in-depth approach using a range of valuation measures appropriate for a specific company or industry.

From the universe of thousands of equity securities, our team generates investment ideas through a variety of methods. If a security appears attractive, detailed quantitative and qualitative research follows. This careful process of identifying undervalued stocks results in an "approved list."

The Result: a unified effort aimed at identifying the best values in the marketplace. From the list of approved stocks, each fund manager constructs a relatively focused portfolio, built on a stock-by-stock basis from the bottom up.

Who Should Invest

Any investor who is seeking a disciplined value manager for the purposes of growing and diversifying a portfolio should consider one of the Oakmark funds, keeping in mind that all equity investments should be considered long-term investments. As value investors, we recognize that patience is a virtue and believe that, over the long term, investors are rewarded for their patience. We generally hold the companies in which we invest for three to five years, a time horizon that we encourage our shareholders to consider as well.

How to Use Value Funds in an Overall Portfolio

Investment styles tend to move in cycles. One style may be in favor for a few years while the other is out of favor, and vice versa. Diversifying the stock portion of your portfolio to include value and momentum/growth investment styles may help reduce overall volatility—and potentially provide more consistent returns over time.

Bottom-Up Investment Process

The Oakmark Glossary

Book value – A company's common stock equity as it appears on a balance sheet, equal to total assets minus liabilities, preferred stock, and intangible assets such as goodwill. A company's book value often differs substantially from economic value, especially in industries such as media.

Business value/Intrinsic value – The perceived or estimated actual value of a security, as opposed to its current market price or book value. Business value can be evaluated based on what a knowledgeable buyer would pay for a business if the company were sold in its entirety.

Growth investing – Investors who look for companies based on whether the stock of a company is growing earnings and/or revenue faster than the industry as a whole or the overall market. Growth investors generally expect high rates of growth to persist, and the stock, in turn, to deliver returns exceeding the market's. A growth mutual fund is generally one that emphasizes stocks believed to offer above-average growth prospects, with little to no emphasis on the stock's current price.

M & A (Mergers & Acquisitions) – Merger: the combining of two or more entities into one, through a purchase acquisition or a pooling of interests. Acquisition: can also be called a takeover, and is defined as acquiring control of a corporation, called a target, by stock purchase or exchange, either hostile or friendly.

Market capitalization (market cap or cap) – The market price of an entire company on any given day, calculated by multiplying the number of shares outstanding by the price per share.

Momentum investing – Approach to investing based on the belief that stock price trends are likely to continue. Momentum investors tend to buy stocks that have been outperforming the market and to sell those stocks when their relative performance deteriorates. Momentum investors do not consider a company's underlying value or fundamentals in their investment decisions.

Multiple – A ratio used to measure a stock's valuation, usually greater than 1. Sometimes used to mean price/earnings ratio.

P/B or Price-to-Book Ratio – A stock's capitalization divided by its book value. The value is the same whether the calculation is done for the whole company or on a per-share basis.

P/E or Price-to-Earnings Ratio – The most common measure of a stock's valuation. It is equal to a stock's capitalization divided by its after-tax earnings over a 12-month period. The value is the same whether the calculation is done for the whole company or on a per-share basis. Equivalently, the cost an investor in a given stock must pay per dollar of current annual earnings. Also called earnings multiple.

Share repurchase – Program through which a corporation buys back its own shares in the open market, typically an indication that the corporation's management believes the stock price is undervalued.

Value investing – Investors who utilize valuation measures such as business value (including growth rate), price/earnings ratio, price/book ratio, and yield to gauge the attractiveness of a company. Managers who employ a value investment style believe that the true, underlying value of a company is not reflected in its current share price, and, over time, the price has potential to increase as the market recognizes the overall value of the business. Value stocks sell at relatively low prices in relation to their underlying business value, earnings, or book value.

Stocks become undervalued for a variety of reasons, including an overall market decline, or when a specific industry falls into disfavor and investors view all companies in that industry in the same light. Consequently, an individual company's stock price may fall, even though it may be only temporarily affected by the industry's problems and its underlying value has remained unchanged.

"x times earnings" ("12 times earnings") – Another way to express a stock's price-to-earnings (P/E) ratio. A stock with a P/E ratio of 12 sells at 12 times earnings.
